## Google Search Console Performance Overview

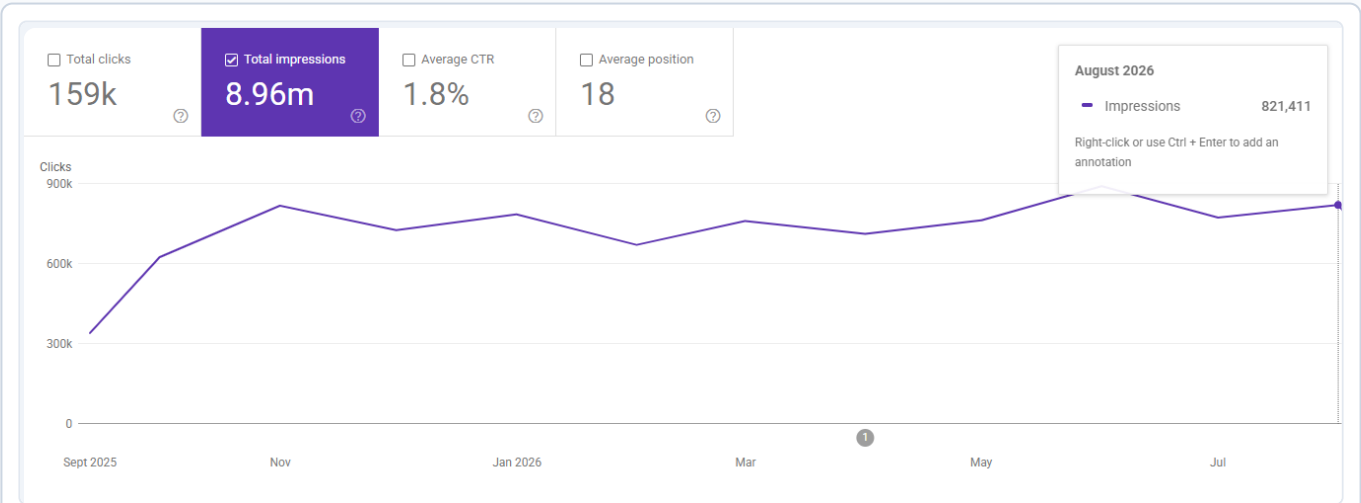

Figure 1: Overall Google Search Console Performance (Sept 2025 – Aug 2026 showing 8.96M Impressions & 159k Clicks)

## The Challenge & Project Scope

Managing an e-commerce website with **more than 3,000 landing pages** presents complex SEO hurdles:

- **Crawl Budget & Indexation Efficiency:** Ensuring Googlebot efficiently crawls high-value transactional pages without wasting resources on duplicate URLs.

- **Structured Data Implementation:** Scaling JSON-LD schema across thousands of dynamic products, reviews, and category hierarchies.
- **Geographic Targeting:** Capturing high-intent buyer traffic specifically within the United Kingdom market.

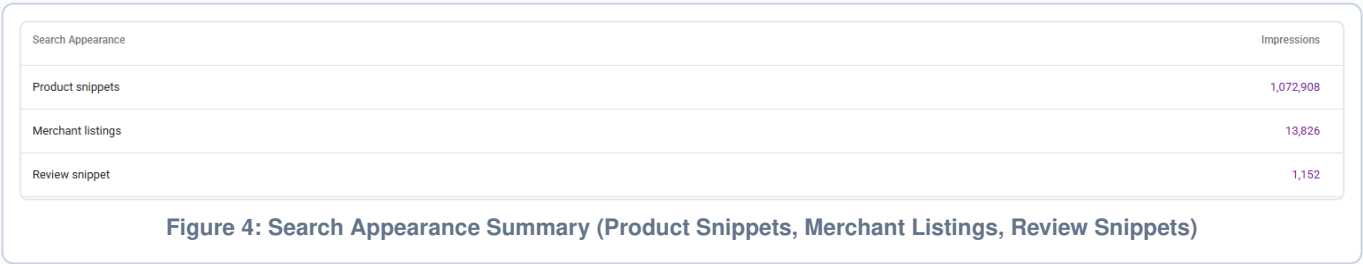

## Geographic & Device Breakdown

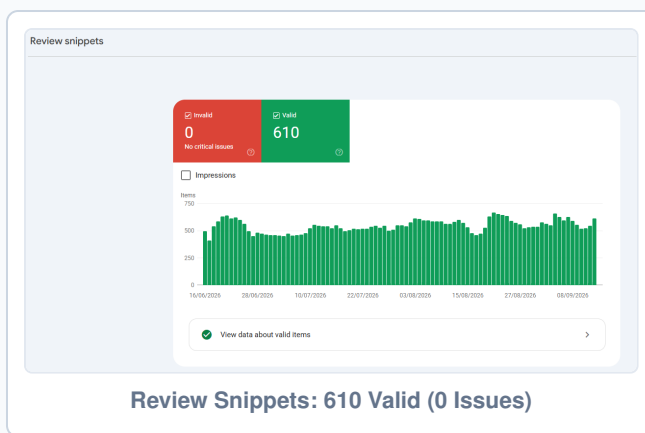

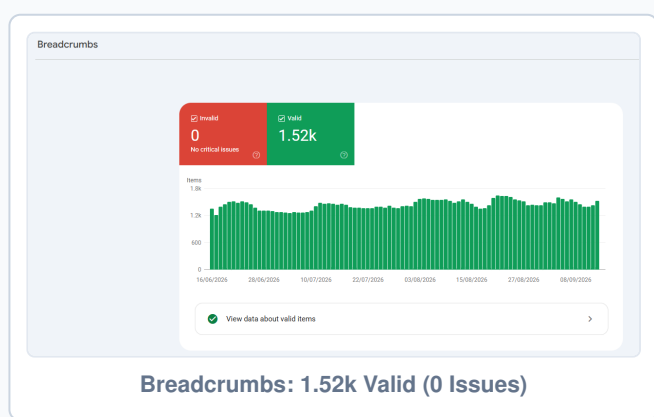

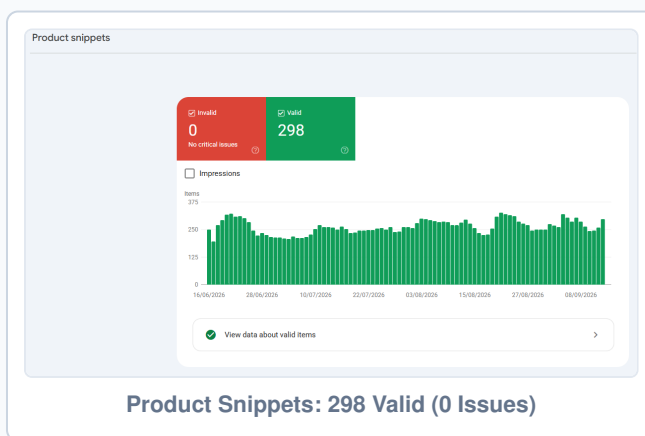

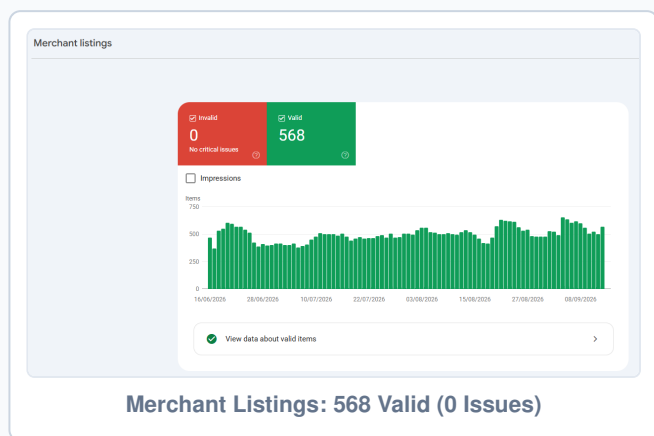

Our geo-targeted UK strategy successfully concentrated search visibility within the core target market, with desktop and mobile traffic well balanced.

## Advanced Schema Architecture & Rich Results Validation

We implemented robust JSON-LD structured data across all templates. Google Search Console data confirms flawless execution with **zero critical issues** across major structured data types:

**Key Takeaway:** 100% valid items across merchant listings, product snippets, breadcrumbs, and reviews ensure high CTR and rich search visibility.

## Conclusion

Scaling a 3,000+ page e-commerce website requires rigorous technical SEO, flawless schema markup, and robust architecture. Through this campaign, **KDTechExperts** demonstrated how systematic technical optimization unlocks exponential visibility and revenue growth.
